Applications Open for $50,000 NVIDIA Graduate Fellowship Awards

Author: Sylvia Chanak

Bringing together the world's brightest minds and the latest accelerated computing technology leads to powerful breakthroughs.

That's why we're taking applications for the 22nd annual NVIDIA Graduate Fellowship Program , which seeks students doing outstanding research relevant to NVIDIA technologies. Our goal: Provide them with grants, mentors and technical support so they can help solve the world's biggest research problems.

We are especially seeking doctoral students working in artificial intelligence, machine learning, autonomous vehicles, computer graphics, robotics, AI for healthcare, high performance computing and related fields. Graduate Fellowship awards are up to $50,000 per student.

Since its start in 2002, the Graduate Fellowship Program has awarded over 185 grants worth more than $5.9 million.

We're looking for students who have completed their first year of Ph.D.-level studies at the time of application. Applicants must be conducting innovative research relevant to NVIDIA technologies or business areas.

The NVIDIA Graduate Fellowship Program for the 2023-2024 academic year is open to applicants worldwide. The deadline for submitting applications is Sept. 9. An internship at NVIDIA preceding the fellowship year is mandatory — eligible applicants should be available for the internship in summer 2023.

For more on eligibility and how to apply, visit the program website .
